

## **About**

Angaza UTDAR film (ultrathin transparency display) is based on the principle of projector reflection imaging, and the surface of the film is coated with a nano-scale photosensitive coating through a vacuum magnetron sputtering coating process, so that the film maintains a high transmittance and also has a high reflectivity(mirror appearance), 170° phantom imaging, composite phantom imaging and stereoscopic suspended phantom imaging.

UTDAR film remains transparent while ensuring that the picture is still bright and the colors are vivid and saturated. The audience can see any object on the back through the holographic invisible screen, and can also use the light transmission secondary imaging, which is more transparent than the traditional projection screen, and can make the image suspended in the air.

# Display principle

# **Key Features**

### Transparent HD

Ithas the unique characteristics of full transparency and high definition, which can be placed in the best advertising position. The visual effect of full transparency, high definition and 3D future technology can quickly improve the publicity effect.

### Ultra-thin profile

Simpleand ultra-thin, resistant to strong light and anti-aging. The appearance is beautiful and generous, fully reflecting the fashion and avant-garde atmosphere.

# High performance and low cost

The existing3D transparent and AR displaytechnologies on the market all reguire high costs, while Angaza double sides projection film is a perfect combination of high erformanceand low cost.

### Commercial value

The existing3D transparent and AR display technologies on the market all reguire high costs, while Angaza double sides projection film is a perfect combination of high performance and low cost.

# Projector

Product parameters	
Thickness	0.2mm
Width	1320mm
Haze	<2.0%
Viewing angle	170° >70%
ansmittance	-20°C-60
Operating temperature	°C
Storage temperature	25°C±1°C
Storage humidity	35%-75%
Resolutions	up to 8k
